

What is Radiant Energy?

- Clean and Constant Electricity from the Sun -

Massive energy is constantly flowing from the sun to the earth. We are bathed in **6,000 times more energy** from the sun than we use.

These solar winds constantly flow to the earth, which acts as a large battery to collect this flow of solar energy. This energy is always available, if we know how to collect it.

Our scientists have learned how to collect this energy, which we call **Radiant Energy**., by ringing the “earth battery bell” with special pulses.

Radiant Energy Panels collect this solar energy 24 hours a day.

Versus **Solar Panels** which collect only visible sunlight energy 4-6 hours a day.
